JetViewer - Case Study: Child Health Data

The Problem:
- Child health system being decommissioned
- Easy, cost effective, access required to historical data

The Solution:
- JetViewer

A large NHS Trust needed access to critical patient information in their old Child Health System. The system was being replaced and a simple, cost effective way of accessing the legacy information was required. The Trust IT Department brought in Burr IST Ltd to provide a solution using JetViewer.

> "Faster, Better and Cheaper …
> JetViewer delivered on all fronts ... users are delighted with the result"
> **Steve Edwards,
> Head of IT Development Services, Gloucestershire Hospitals NHS Trust**

The Project:
- Data processed and cleaned by Burr IST Ltd
- JetViewer set up to provide easy to use, powerful access to the legacy data

The Outcome:
- Data access solution implemented quickly and cheaply
- Users can quickly and easily find patient records and all related information from the old system

Burr IST developed tools to process and clean the data extracted from the old child health system, using rules agreed with the system users. The processed data was compiled into a Microsoft SQL Server Database. JetViewer provides a powerful, user friendly view of the legacy data. The easy, transparent view provided by JetViewer allowed the data to be quickly validated and within a few moments of the user training session, end users could quickly and easily retrieve all the information they required from the legacy data. JetViewer runs securely on the Trust intranet, accessed through the user's normal web browser - no additional software is required on the user's machines.
